

# Colour Options

## Opaque Finishes

---

**Standard range** – our standard colours with all relevant fittings available colour matched without any additional charge (including trickle vents, historic butt hinges, historic putty and tilt and turn drainage rails).

**Extended range** – we offer the full range of RAL Classic, RAL Effect, RAL Design, NCS and BS colours. When colour matched fittings are required (including trickle vents, historic butt hinges, historic putty and tilt and turn drainage rails), these are only available in RAL Classic, will be special order and may have a minimum order charge. We will advise of any items affected by this.

**Complementary range** – we are able to offer a range of colours to complement most colours in popular ranges such as Farrow & Ball, Fired Earth and Little Green Paint Company. Please note, these can have some colour variation, as well as sheen and texture variation.

**Colour match** - we are able to colour match to any reference or physical sample provided. We can do this by either visually matching to the closest RAL, NCS or BS colour available or we can send the colour away to be analysed to provide us with the colour composition to mix the paint. The cost of this process will depend on your requirements:

- Closest match to RAL, NCS or BS colour without sample approval – No charge
- Closest match to RAL, NCS or BS colour with sample approval – £75
- Colour matched to sample with sample approval - £150

## Translucent Finishes

---

**Standard range (2018)** – our standard translucent finishes. When colour matched are required (including trickle vents, historic butt hinges, historic putty and tilt and turn drainage rails), these will be matched to a close colour, but due to base material variations these will look noticeably different.
